## Palabra e Imagen (protein) stalk (region)

Luis Pestana

OPS/OMS, Washington, D.C.

**Contexto:** «The cleavage of a protein by a secretase generally occurs close to the extracellular face of the membrane in a **stalk** region between the membrane-spanning domain and the extracellular domain.»

[ <http://www.bmb.leeds.ac.uk/staff/nmh/project1.html> ]

**Propuesta de traducción:** (región del) «tallo» (de la proteína)
